FROM THE MANAGING DIRECTOR'S DESK

I am delighted to introduce you to Harvest Green Seeds which has been showered with immense trust and reliance by our customers in 11 countries and has been at the forefront in incorporating latest seed growing practices and technology in order to maximize the benefits for all stakeholders.

Since inception company's singular focus has been on 'Quality' coupled with High Germination and Purity which are the root requirements of Seed Industry. India has varied Agro-Climatic conditions which allows us to produce throughout the year and presently we have 745 acres under production in four different corners of the country.

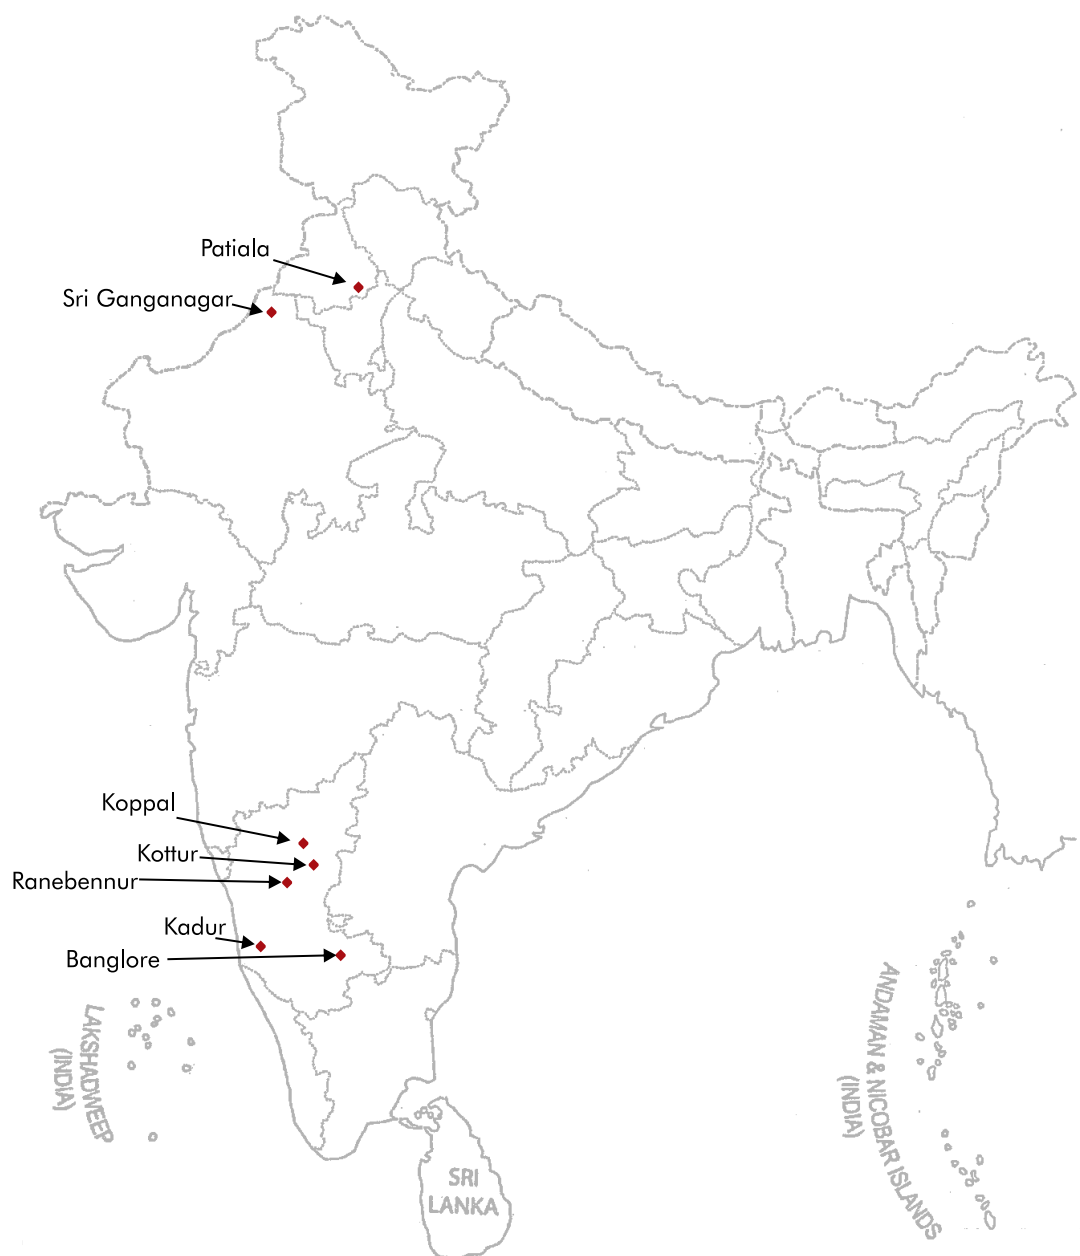

The company lays special emphasis on production of Hybrid seeds and at the same time is also involved in production of Open pollinated seeds in order to cater to all kinds of requirements that our customers have. Presently we undertake Custom Seed Production for our clients from Europe, United States and Asia.

We are one of the select few companies in India that in addition to Vegetable seeds produce Flower seeds in bulk and presently have 125 varieties of Flower seeds under production.

I hope this catalog of ours helps you decide the products suitable for your markets and we look forward to being associated with you in the long term and build meaningful partnerships.
Best wishes to you and your family!

Regards
Gurjot Singh Thind
(Managing Director)

SEED PRODUCTION LOCATIONS

HYBRID SEED PRODUCTION

- ◆ Nurseries are raised in Polyhouses for protection against insect transmitted diseases.
- ◆ Seedlings are grown in plugtrays and are field transplanted with good establishment for uniform crop growth.
- ◆ Mulch film and drip irrigation is used for weed control and fertigation management.
- ◆ Flowers on female plant are hand emasculated and are bagged with coloured paper bags
- ◆ Flowers are rebagged after pollination with white cover and tagged with thread around peduncle for easy identification of self fruits if any at the time of Harvesting.
- ◆ Once the fruits have been harvested after pollination they are stored for Curing before seed extraction
- ◆ Seed is processed at our state of the art Seed Processing cum Conditioning plant located in Patiala and is stored in 20000 sq.ft of Temperature controlled warehouse space. Seed drying is undertaken to maintain requisite level of Moisture before final packing for dispatch.
- ◆ Stringent grow out tests and germination checks are carried out to ensure supply of high purity seeds.
- ◆ We are the only Seed production company in India to be equipped with In-House Optical color sorting
